Education

University of California, Berkeley Berkeley, CA

B.A. in Cognitive Science *Expected Graduation: Jun 2028*

- **GPA:** 3.93/4.0, Dean's List
- **Courses:** Data Abstraction & Structures, Object-oriented Analysis & Design, Object-oriented Programming, C++, Discrete Mathematics, Linear Algebra, Vector Calculus

Technical Skills

Languages: Java, C++, Python, JavaScript, HTML/CSS
Frameworks: React, Flask, FastAPI
Developer Tools: VSCode, Claude Code, Cursor, Git, Vercel, Figma, Supabase

Projects

Flight Passport | *JavaScript, HTML, CSS, Supabase* Sep. 2026

- Built a mobile-first, installable PWA in vanilla **JavaScript**, **HTML**, and **CSS**, including a dark/light theme toggle, a computed flight-stats dashboard, and **AviationStack API** integration, backed by **Supabase** (Postgres + Auth)
- Built an interactive 3D globe visualization rendering a user's flight history as animated arc routes between airports, with click-to-inspect details and prefers-reduced-motion accessibility support
- Built a photo-upload feature with client-side image compression (Canvas API downscaling before upload) and a full-screen photo viewer implemented as an accessible modal dialog

Will I Fly | *React, JavaScript, REST APIs, CSS* Aug. 2026

- Built a component-based **React** frontend with hooks-driven state management, handling async **API** calls, loading states, and error handling for a real-time flight search experience
- Designed and implemented reusable UI components (search, live results, scroll progress, explainer sections) consuming a **FastAPI** backend, with debounced input handling and smooth scroll-to-result UX
- Connected the frontend to a Python ML backend via **REST API**, rendering **SHAP**-based feature contributions as a custom, color-coded bar-chart breakdown of what raised or lowered each flight's delay risk

De Anza Library Inventory System | *Flask, HTML, CSS, UML* May. 2026

- Translated **UML** diagrams (class, state, and sequence) into a full-stack library portal, building **10+** responsive front-end pages for distinct borrower and staff user flows
- Built a custom **CSS** design system (CSS variables, custom typography, flash-message UI, card-based layouts) for a consistent look across checkout, reservations, reports, and study room booking screens
- Deployed on **Vercel**, with patron-facing and admin-facing UIs handling book checkout, returns, reservations, and study room booking across a catalog of **500+** titles and **100+** patron accounts

Lumino | *HTML, CSS, JavaScript* Mar. 2026

- Designed and built a 3-page responsive website using **HTML** and **CSS** to showcase personal UX/UI projects under a consistent visual brand
- Implemented reusable layout patterns (shared navigation, profile/bio layout, product showcase pages) with responsive sizing constraints and **JavaScript** for dynamic page styling
